PRODUCTION OF PLASTIC PRODUCTS IN LATVIA

*«Great things in business are never  
done by one person.*

*They are done by a team of people.»*

- STEVE JOBS

# If your company needs:

- Product design improvement
- 3D prototyping
- Mold making
- Production of plastic products

We are here to get to know each other and start cooperation!

The company started working in the field of plastic processing in 2012, bringing together specialists with more than 20 years of experience in the production of products of various complexity from various thermoplastic materials.

# What we produce?

---

**Product packaging** - lids, containers, color boxes;

**Construction goods** - clamps, spacers, supports, pipe stoppers, ventilation elements, fasteners;

**Agricultural goods** - boxes for seedlings, pots, clamps;

**Children's goods** - toys, elements of playgrounds;

**Technical products** - equipment parts, filter housings, protective elements;

**Water supply system fittings** - quick connections and soldering;

**Housings for various electrical equipment** - for remote controls, wireless transmitters, etc.

# How we produce?

## THE PRINCIPLE OF INJECTION MOLDING OF PLASTIC PRODUCTS:

Injection molding is a production process using molds.

Thermoplastic material (plastic, polymers) is heated until it melts. Then it is pressed into a mold where it is cooled to form the intended product shape.

In the final stage, it is pushed out of the shape.

The whole process usually takes between 2 seconds and 2 minutes.

# Our works

# Frequently asked questions:

---

## How much does mold cost?

The cost of the mold is determined by various parameters, such as the complexity of the product design and the required production capacity.

The higher the production speed, the lower the price of the finished product, but the higher the price of the die itself. Prices from 4000 euros + VAT.

## How long does it take to make a mold?

The average production time is 3 months. In some cases, simple molds take 1.5 months to make.
